

ADA Compliant Lavatory Tubular Covers

For Under-Lavatory Exposed Plumbing in Bathrooms

INSTRUCTIONS:

NOTE – Application of Dearborn Safety Series Covers should be started only after the entire lavatory supply and tubular system has been installed, tested and confirmed to be leak free.

1. Confirm that all pieces of your kit are included in the bag.
The individual pieces of the kit are listed on the bag. Some applications may require a different kit or additional components. For example: ADA sink applications can include a straight or offset grid drain tailpiece.
2. Measure, cut to desired length and install the Supply Line Covers.
3. After the Supply Line Covers are in place, install the Stop Covers by placing them over the valve and wrapping them around the Supply Line Covers.
4. Measure, cut to desired length and install the Straight Grid Drain Tailpiece Cover. This cover should terminate directly above the J-Bend nut.
5. Install J-Bend Cover by wrapping around the bottom of the Straight Grid Drain Tailpiece Cover.
6. Measure Wall Tube Cover and cut to length. The Wall Tube Cover should extend to, and terminate at the wall flange. If additional length is required, use Part # ADA095 to cover any wall tube extensions.
7. Inspect that all hook and loop fasteners are fully inserted and secure.

REQUIRED TOOLS: Scissors/Razor Knife, Tape Measure, Pencil, Pen or Marker

APPROVALS & LISTINGS

IAPMO PS-94
ASTM C1822-2018
ASME A112.18.9

ASTM E84 (25/450)
ASTM G21 & G22 (anti-fungal, anti-bacterial)
Canada Barrier Free Code

Product Details	
Material	Ethylene Vinyl Acetate (EVA) foam
Nominal Wall	1/4" Consistent
Durometer	25 - 35 - Shore C
UV Protection	Will not fade or discolor
Durability	Virtually indestructible
Trimming	EVA is easily trimmed with almost any cutting instrument, including scissors or razor knife
Fasteners	Integrated into product design
Color	White
Paintability	Apply latex paint
Burning Characteristics ASTM D-635	25/450 FR per ASTM E-84
Bacteria/Fungus Resistance	ASTM G21, ASTM G22
Maintenance	Will not be harmed by common or industrial-strength cleaning agents

Accommodates trap with and without cleanouts.
Securely fits both 1 1/4" and 1 1/2" tubular systems.

Part Number	Description	Case Pack Qty.	UPC	Category
ADA095	For use when wall tube must be extended beyond standard length	10	041193000903	15
ADA097	Offset Grid Drain Covers only	10	041193000897	15
ADA098	Supply Line and valve covers only (2 each)	10	041193000880	15
ADA099	For use in repair application or when only a P-Trap and standard straight grid drain require ADA protection	10	041193000873	15
ADA100	For use in lavatory sink applications utilizing an ADA compliant offset grid drain	10	041193000859	15
ADA101	For use in lavatory sink applications utilizing a standard straight grid drain	10	041193000866	15

SAFETY SERIES

33% Faster Installation
than the leading competitor!

Since 1896, Dearborn has been a leader in commercial tubular products. Now, we are proud to present our newest addition:
The Dearborn Safety Series ADA Compliant Lavatory Tubular Covers.

FAST AND EASY INSTALLATION

The Dearborn Safety Series installs 33% faster than the leading competitor.

- The **180° opening** is designed to make installation as simple as possible. Just **open, wrap and done!**
- The **Hook & Loop Fasteners** make for easy installation and removal for maintenance. Press the hook & loop fasteners together and **rest assured in the security provided.**

- Competitive product uses a fastening system that is not flexible and often fails when the product is made to bend.
- Competitor product fastening system often breaks during removal for maintenance.

EASILY ACCOMMODATES OFF-SETS

- The **flexible material** is easier to install on offset supply lines and requires **no secondary fasteners** like zip ties or duct tape.

- Competitive product cannot accommodate offsets and secondary fasteners are often needed due to lack of flexibility.
- Competitive product can fall off when made to bend, eliminating its purpose and creating liability risk.

EASY TO CUT AND SIZE

- The **EVA foam** material is **easy to cut** and trim with scissors – No need to struggle with other tools or uneven cuts.
- The **durable design** withstands impact and **protects against burns and scratches.**

- Competitive product is difficult to cut to size due to rigid material.

CLEAN APPEARANCE AND AESTHETICS

- The durable **Form-Fit Design** keeps the shape of the lavatory tubular for a neat appearance.
- The **EVA foam** is easy to clean, antimicrobial and **will not yellow over time.**
- The **flexible material** stays where you put it and **won't fall off over time,** minimizing liability.

- Competitive product often has a saggy appearance and yellows over time.
