RE: REACH/RoHS Compliance

Encore Wire Corporation is an environmentally conscientious company that believes in manufacturing products that are environmentally safe. The products used in the construction of 600-volts THHN/THWN-2, XHHW-2, USE, SE, Tray Cable, AC Cable, and MC Cable for building wire with Copper or Aluminum inner conductors are safe and meet the requirements of REACH and RoHS restrictions.

Our Cross-Linked Polyethylene insulation, used on all sizes of our USE-2, XHHW-2 building wire product is Lead-free and does not contain any of the Substances of Very High Concern (SVHC).

Our Polyvinyl Chloride (PVC) insulation stock, used on all sizes of our THHN/THWN-2, Tray Cable building wire product is Lead-free and does not contain any of the Substances of Very High Concern (SVHC).

Our SUPERSLICK ELITE spray on coating, used on our USE-2, THHN/THWN-2, XHHW-2 Building wire product is Lead-free and does not contain any of the Substances of Very High Concern (SVHC).

Our uncoated solid and stranded Aluminum and Copper, meets the RoHS requirements of less than 300 parts per million (ppm) of Lead. We strive to maintain the lead content in aluminum and copper well below these requirements.

We can ensure you that all of our vendors that supply us with materials meet both REACH and RoHS. However, we are not 'registered' with REACH because typically, European (EU)-based importers and chemical manufacturers must register chemical substances prior to importing/manufacturing.

We here at Encore Wire Corporation want to manufacture a product that is safe for the environment and meets the REAC and RoHS initiatives. Encore Wire has invested valuable resources in providing a dependable, quality product with a long life. Encore's business concept recognizes that a quality product built for longevity could have an lasting effect on the environment.

I hope this information is helpful. Please let me know if you have any additional questions.

Sincerely,

**Kevin Porter
