A Division of WCM Industries, Inc.

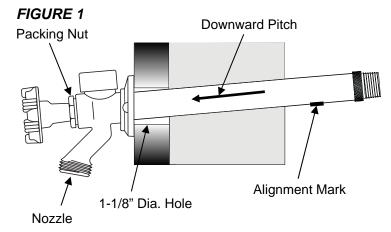

Rev 05/10 Form No. II17.102

# Model 14 & 17 Freezeless Wall Faucet

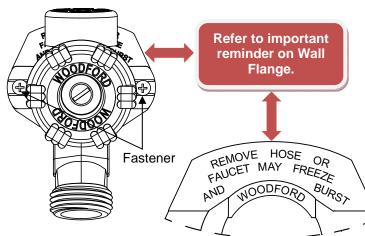

Model 14 No anti-siphon protection

Model 17 Anti-siphon protected.

### FIGURE 2

Wall faucets must be properly installed and operated to insure drainage. Improperly installed or operated wall faucets may freeze and burst in freezing weather.

#### **INSTALLATION INSTRUCTIONS:**

- 1. Before installation, flush supply line to remove any debris.
- Drill a 1-1/8" diameter hole through the wall in the desired location and insert the faucet from the outside. FIGURE 1
- 3. Install with nozzle pointing down. FIGURE 1
- 4. From inside the building, the alignment mark on the tube can be used to correctly align the faucet when the mark is pointed down. *FIGURE 1*
- 5. The tube must have a slight downward pitch for proper drainage. *FIGURE 1*
- For solder connection, open faucet to full open position before soldering. Excessive heat can damage valve seat rubber or stainless steel seat and factory solder joint.
- Secure faucet to the wall using appropriate fasteners installed through the holes in the flange. Adjustable flange matches slope of siding. FIGURE 2

**NOTE:** The packing nut, located behind the handle, has been factory adjusted. If leakage should occur after installation or use, the packing nut can be tightened to stop the leak. **FIGURE 1**
