ABOUT US

Our product was designed with service in mind and is proudly made in the USA.

The idea for ProCharge came from years of working in the HVAC field while wishing for better products for leak detection and repair. Most UV dye and sealant products on the market are a one time use and they typically make a mess no matter how careful you are. For these reasons, we saw a need for a new, smarter way to put additives into an HVAC system that could be used multiple times and wouldn't leave a mess.

WHY PRO CHARGE

- Servicing HVAC equipment is simple with these perfectly pre-blended formulas.
- Each product reseals for multiple uses and can service up to 6 tons of cooling.
- Every 2lb container has an easy to use 1/4" service valve for convenient accessibility on most jobs.

PRO CHARGE PRODUCTS WORK GREAT FOR:

- New installs/replacements
- Seasonal leak management
- Preventative maintenance
- Increased equipment longevity

ONE-STOP SOLUTIONS

“These products are a game changer for the industry.”
